

Subject: Web System

Each command should be explained in my own words so that I can clearly understand its purpose and function. This ensures I am not just copying commands but also learning how they work and why they are needed when uploading source files to GitHub.

1. git init – Starts a new Git repository.
2. git add . – Adds all files to be tracked.
3. git commit -m "message" – Saves the changes with a message.
4. git branch -M main – Sets the branch name to main.
5. git remote add origin <link> – Connects the local folder to GitHub. 6. git push -u origin main – Uploads the files to GitHub.
